WORK EXPERIENCE

Irevault

Full-Stack Engineer

Mar. 2023 – Aug. 2026

Lagos, NG

- Collaborated with a full-stack team to build Irevault, a platform for selling digital marketing, working across both frontend and backend.
- Built and integrated frontend interfaces with backend REST APIs as part of a full-stack team.
- Wrote API tests with Jest and Supertest.
- Received the product requirements document (PRD) and broke it down into technical tasks, API endpoints, data models and UI requirements, aligning with the team on scope before development started.
- Delivered features end to end, from PRD to production: database design, REST APIs, frontend interfaces, testing and deployment.
- Migrated Bonshare core services to cloud infrastructure (AWS/GCP), improving system reliability and reducing API latency during peak loads.
- Mentored 3 junior engineers in code reviews, testing practices, and performance optimization, improving team velocity.

Century Gateway

Full-Stack Engineer (Contract)

Jan. 2026 – May 2026

Ado-Ekiti, NG

Project: Exclusive – Multi-Category E-Commerce Storefront

- Translated the product requirements document (PRD) into technical tasks, REST API endpoints, MongoDB data models and UI requirements, aligning with stakeholders on scope and priorities before development began.
- Designed the database schema and built the backend with Node.js, Express and MongoDB, covering users, products, categories, carts and orders, with secure JWT authentication and request validation.
- Developed the responsive storefront with React and Tailwind CSS, including category browsing, product listing and detail pages, search and filters, a shopping cart and a checkout flow.
- Integrated the frontend with the REST APIs, handling loading, error and empty states so shoppers get fast, reliable interactions across devices.
- Wrote API and unit tests for core endpoints and business logic, and used code reviews and structured debugging to catch issues before release.
- Owned delivery from PRD to production, deploying to Vercel, running pre-launch checks and documenting the API and setup so the client could maintain the product after the contract ended.

Enegxi
Full-Stack Engineer
Project: TaskFlow

Nov. 2024 – Feb. 2026
Lagos, NG

- Built a real-time Kanban management platform using Next.js, Tailwind CSS, Zustand and Socket.io, enabling instant board synchronization across active sessions.
- Managed application state with Zustand and persisted board state across sessions, so users keep their work between visits.
- Built the project end to end, from planning and UI design to backend APIs, database design and deployment.
- Developed drag-and-drop task management with boards, columns and cards, so users can create, edit, move and organize tasks seamlessly.
- Designed REST APIs and a database model for users, boards, columns and tasks, with secure authentication and request validation.
- Developed RESTful APIs for various client projects, ensuring secure data flow between frontend and backend.
- Applied a TDD approach and automated unit tests for the client codebase.

Nestuge
Senior Fullstack Engineer (Contract)

Jan. 2025 – Dec. 2025
Lagos, NG

- Engaged as a contract fullstack engineer during a critical turnaround period, inheriting a product with 60+ open critical bugs, zero automated tests, and less than 80% uptime, the lowest in product history.
- Standardized engineering processes including code review workflows, testing protocols, and deployment checklists, reducing production incidents by 72% over 4 months.
- Refactored legacy backend services and frontend components, removing over 3,000 lines of dead code, reducing technical debt and improving build times.
- Improved product stability metrics, decreasing crash rates and raising system uptime to 99.3% over the engagement period.
- Re-architected inefficient database queries and API endpoints, reducing average response time to around 170ms.
- Implemented comprehensive error logging and monitoring (Sentry + Datadog), which drastically reduced the mean time to detection (MTTD) for issues and bugs.
- Mentored 3 in-house developers on clean code practices, testing strategies, and debugging techniques, enabling the internal team to maintain stability post-engagement.
- Delivered 30+ critical feature enhancements while simultaneously reducing bug backlog, achieving 100% on-time delivery for agreed milestones.
- Documented system architecture, API contracts, and runbooks, reducing onboarding time for new developers the company might want to hire in future.

DrosCare
Full-Stack Engineer

Jun. 2024 – Dec. 2025
Lagos, NG

- Designed and developed DrosCare, a hospital website where different departments communicate and attend to patients.
- Built both the frontend and backend of the platform, enabling hospital departments to coordinate patient care in one system.
- Implemented real-time messaging between hospital departments using Socket.io.
- Built role-based access so each department sees only the tools and patient information it needs.
- Secured the platform with JWT authentication and Zod request validation.
- Designed REST APIs and a MongoDB data model for patients, departments and cases.

- Led technical discovery sessions with prospective clients, translating business requirements into actionable PRDs and system design proposals for outsourced engineering projects.
- Wrote unit tests for each endpoint, service and function to improve reliability and efficiency.
- Enhanced frontend performance via code-splitting and lazy loading, decreasing dashboard load times.
- Mentored 3 junior engineers in code reviews, testing practices, and performance optimization, improving team velocity.

Dwello

Full-Stack Engineer

Aug. 2022 – Nov. 2025

Canada

- Designed and developed Dwello, an apartment rental website where users can browse, search, and rent apartments, covering both the frontend and backend.
- Built property listing and apartment detail pages with Next.js and Tailwind CSS, including search and filters for location, price, and number of rooms.
- Implemented JWT authentication with role-based access so tenants can save and book apartments while landlords can create and manage their listings.
- Designed REST APIs and a MongoDB data model for users, apartments, and bookings, with Zod request validation on every endpoint.
- Integrated Cloudinary for apartment image uploads and optimized page performance for fast loading on mobile.
- Review candidate technical assessments and lead engineering debrief sessions to maintain high hiring standards for talent placed with Canada, UK, and global clients.
- Spearhead technical due diligence for new client partnerships, evaluating project viability, risk factors, and talent requirements before contract signing.

Panto Furniture

Frontend Developer

Oct. 2023 – Feb. 2025

Lagos, NG

- Developed the frontend of Panto Furniture, an online store where users can buy chairs and other household items.
- Built responsive product listing and product detail pages with Next.js and Tailwind CSS.
- Developed responsive Next.js PWA web frontend interfaces ensuring intuitive user interactions and real-time updates.
- Implemented the shopping cart and checkout interface with Zustand state management.
- Optimized page performance and Core Web Vitals.
- Built the storefront frontend end to end, from UI implementation and reusable components to backend API integration and deployment.

EDUCATION

Ekiti State University

B.Sc. Computer Science

2025

Ado-Ekiti, NG

- Graduated with Second Class Upper (Honours).

Enegxi Institute

Full-Stack Development Certification

Oct. 2025

New Horizon

User Interface and User Experience (UI/UX) Certification

Dec. 2024

TECHNICAL SKILLS

Programming Languages: JavaScript (ES6+), TypeScript

Frontend: React.js, Next.js (App Router), Zustand, HTML5, CSS3, Tailwind CSS

Backend: Node.js, Express.js

Database & Caching: MongoDB (Mongoose), MySQL (Prisma ORM), Redis

DevOps & Cloud: Git, GitHub, Cloudinary, Vercel, Render, Winston/Morgan Logging

Testing: Unit/Integration Testing (Jest, Supertest), Postman

Other: RESTful APIs, WebSockets (Socket.io), JWT Authentication, Bcrypt, Zod, Yup, Helmet, Rate Limiting, CORS, UI/UX Principles, Core Web Vitals

SOFT SKILLS

Problem-Solving, Cross-functional Collaboration, Product Mindset, Architecture Design, Mentorship, Communication, Adaptability.

FELLOWSHIP

Imagine Foundation e.V. Full-Stack Engineer Fellow and Certification	2024
---	------

Junior Chamber International Nigeria	2023
--------------------------------------	------

MENTORSHIP & COMMUNITY IMPACT

New Horizon

Technical Mentor

- Mentored 20+ students in JavaScript, React and frontend fundamentals through workshops and code reviews.
- Led a 3-month cohort training on frontend development, with 14 projects deployed by mentees.
- Contributed to open-source documentation to improve accessibility for beginners.

Google Developer Student Clubs (GDSC)

Guest Speaker

- Delivered talks on microservices architecture and Docker best practices to 120 student developers at Ekiti State University, Ado-Ekiti.
- Participated in hackathons and provided technical guidance on fintech and GovTech solutions.

CodeLagos (Lagos State Initiative)

Volunteer Tutor

- Taught JavaScript and web development fundamentals to underserved youths in Lagos in the 2022 cohort.
- Helped students build their first portfolio projects, with 2 winning local hackathons.
